
**Half-day Astronomy Course at the
South Downs Planetarium**

How to Choose and Use Your New Telescope

Using a telescope to view the night sky is a real joy. The rings of Saturn, the cloud belts of Jupiter, distant nebulae, star clusters, and even some galaxies, are all within the grasp of a small telescope, but what to buy?

In this half-day course, for people with little or no experience of observing the night sky, we will help you to choose an instrument that suits you.

When you've acquired your new telescope how do you set it up to enjoy the wonders of the night sky?

We'll provide you with the answer to this question, and show you how to go about locating celestial objects. We'll also suggest some target objects to suit your own telescope.

Since this is a 'hands on' course, please feel free to bring your own telescope along on the day.

Saturday, 25th November, 2017

**1.30pm to 4.30pm
(Doors open, and set-up, at 1.00pm)**
